

IGC'S GLOBAL TARIFF FRAMEWORK UNDER THE REDEFINED UNITED NATIONS (R-UN) A GCIGS Initiative for World Economic Balance & Trade Peace

Introduction

In an age where tariff wars have become a geopolitical game of dominance, the world is trapped in a cycle of retaliation, inflation, divisiveness, and isolation. From 145% U.S. tariffs to 125% retaliatory strikes by China, and the European Union pivoting toward new alliances, global trade is no longer a collaborative force - it's a fractured battlefield. The U.S.-China tariff war alone contributed to a \$1.5 trillion global trade disruption in 2024, pushing inflation and food insecurity to dangerous highs (<https://x.com/6GIRBIOME/status/1911022257603805681>). The Redefined United Nations (R-UN) and its International Governance Council (IGC) offer a unified solution: a global tariff framework directly managed by the IGC, designed to end tariff wars and promote trade equity.

Why the World Needs R-UN and IGC for Global Trade Governance The R-UN serves as the global governance authority, ensuring regulatory compliance, ethical standards, and international cooperation across all sectors. The IGC, as its policy-making and enforcement body, handles all issues - from trade tariffs to AI governance - under a harmonized framework. By directly managing tariffs, the IGC ensures they serve as instruments of balance, not retaliation, aligning with the R-UN's mission to foster global stability, sustainability, and cooperation.

I. The IGC's Role in Tariff Regulation

-The International Governance Council (IGC) under the R-UN directly regulates tariffs as part of its mandate to address all global issues. Through regular meetings and a 5-year strategic plan, the IGC ensures tariffs promote trade stability, equity, and transparency, preventing economic collapse and fostering an equitable global economy.

II. Why Direct IGC Management of Tariffs?

- Tariffs have become tools of chaos, not strategy.
- The IGC provides a unified body to manage all global issues, including tariffs, replacing fragmented systems.
- Direct management ensures efficiency, clarity, and impartiality, avoiding the need for separate committees.

III. Mission Statement To ensure tariffs promote global trade stability, equity, and transparency, preventing economic collapse and fostering an equitable global economy under the IGC's unified governance.

IV. Core Principles

- Balance-by-Design: Tariffs must pass multi-dimensional impact tests (economic, social, environmental).
- No Retaliation Without Review: Tariff retaliations must be reviewed by the IGC.
- Equity Matters: Developing nations must be protected from disproportionate damage.
- Sovereignty, Not Surrender: The IGC governs policy ethics, not national choices.
- Trade is not war - it's a shared responsibility.
- Tariffs must be tied to impact, not emotion.
- Independent of governments and legacy institutions (e.g., WTO, IMF).
- Evaluates tariffs through a multi-factor lens (inflation, trade deficits, social impact).
- Provides preemptive analysis to prevent retaliatory cycles.

V. The IGC Tariff Framework: Balance-by-Design Purpose-Driven Tariffs must serve one of three objectives:

- Economic Recovery

- Sectoral Protection (tied to strategic innovation)
- Environmental or Ethical Correction

3-Layer Justification Model Every tariff must include:

- Economic Rationale: Impact on domestic and global trade.
- Ethical Lens: Effect on vulnerable populations.
- Exit Plan: Rollback criteria within 12–24 months.

Integrated Digital Registry The IGC maintains a GCIGS Tariff Ledger (GTL) for public visibility of tariff policies, updated in real-time.

Equity Adjustments The IGC allocates Compensatory Adjustment Credits (CAC) to support smaller economies impacted by tariff actions.

VI. Mandate of the IGC for Tariffs

- Pre-review of tariff hikes above 10%.
- Emergency response during trade disruptions.
- Issue public scorecards and compliance grades for nations.

VII. How It Works: The “Balance-by-Design” Algorithm

The IGC evaluates tariffs using 5 key levers to ensure fairness:

Metric	Description	Weighted Impact
Trade Surplus/Deficit Ratio	High surplus exporters are nudged toward reinvestment.	30%
Labor & Ethics Score	Countries using unfair labor practices incur higher tariffs.	20%
Environmental Sustainability	Goods with high carbon or waste footprint face adjustment.	20%
Technology Transfer Index	Promotes innovation-sharing instead of tech dumping.	15%
Currency Manipulation Risk	Prevents devaluation strategies to undercut markets.	15%

This algorithm ensures tariffs are applied equitably, balancing economic, ethical, and environmental factors.

VIII. 6GIR/NA6UN Integration

- G-TRADE: Absorbs currency shocks, buffering trade volatility for nations.
- UCO (Unified Capital Offering): Redirects tariff revenue into infrastructure and social equity programs.
- 17,000-Mile Trade Rail: Facilitates real-world trade to reduce digital overreliance.

IX. IGC Structure for Tariff Regulation The IGC consists of 2 members from each GCIGS sector (e.g., technology, agriculture, trade), rotating every 3 years to ensure impartiality and fresh perspectives. No separate committees are formed; the IGC directly manages tariffs through regular meetings, supported by AI-driven tools for analysis, monitoring, and enforcement.

X. IGC Tariff Regulation Framework

- Tariff Review Process: Nations must submit tariff impact reports to the IGC for review before implementation.
- Equity Monitoring System: The IGC uses an AI-driven system to rank trade fairness and identify developing economies for protective adjustments.
- Equity Protection Rule: Ensures developing nations are protected from disproportionate tariff impacts.
- Dynamic Tariff Review Cycle: Emergency tariffs are reviewed every 120 days.

XI. IGC Objectives for Tariffs

Objective	Description	Success Metric
Stop Weaponized Tariffs	Prevent unilateral destabilization of global markets.	Reduce retaliatory tariffs by 30% in 5 years.
Ensure Global Reciprocity	Promote equitable trade agreements.	Increase global trade volume by 15%.
Protect Emerging Economies	Shield vulnerable nations from exploitative retaliation.	Improve equity scores for developing nations by 20%.
Empower Data-Driven Policy	Decisions backed by transparent, AI-driven analysis.	100% of tariff decisions backed by AI analysis.
Enable Dynamic Response	Tariffs are reviewed regularly—not frozen or politicized.	Review 90% of emergency tariffs within 120 days.

XII. Why Direct IGC Management is Urgently Needed

- The U.S.–China tariff war has caused \$1.5 trillion in global trade disruption.
- The EU is pivoting to China, openly challenging U.S. strategy.
- Developing nations are bearing the cost of superpower feuds.
- Without unified governance, the global trade system will collapse.

XIII. IGC vs Legacy Institutions

XIII. IGC vs Legacy Institutions

Legacy Institutions (e.g., WTO)	IGC Under R-UN
Fragmented and politicized	Unified and impartial
Slow to adapt	AI-driven and responsive
Limited scope	Comprehensive (A to Z)

At the NATO Summit (June 24–26, 2025), the IGC’s tariff framework can support NATO’s goal of raising defense spending to 2.5%–3% of GDP by ensuring economic stability through balanced trade policies (<https://www.nato.int>).

XIV. Flat-Rate Universal Tariff with Fairness without Fragmentation

- 10% global base tariff (FRUT), reviewed annually.
- 8% ceiling for developing economies (unless reviewed through arbitration).
- Developing economies identified using AI-driven data (GDP per capita, trade volume, HDI).
- Prioritized CAC for developing nations.
- Visibility boosts through the Equity Monitoring System.
- Flexibility for exemptions via Tariff Review Process.
- Enforcement: Non-compliance results in GCIGS certification downgrade.

XV. Implementation: IGC’s 5-Year Plan for Tariffs

- Year 1 (2025): Establish the framework, integrate GTL, review global tariffs.
- Year 2–3 (2026–2027): Implement FRUT, monitor outcomes, expand G-TRADE.
- Year 4–5 (2028–2029): Achieve KPIs: 30% less retaliation, 15% trade growth, 20% equity score rise.

XVI. Closing Note The IGC under R-UN is a necessity, not a proposal. Tariff wars crush small businesses, escalate poverty, and destabilize peace. By ending them, the IGC creates jobs, reduces poverty, and supports campaigns like #7DayChallenge to end hunger.
